

A SERVICE MODULE THAT PROVIDES AN APPROPRIATE REPOSITORY TO ACCEPT THE LARGE VOLUME OF DATA GATHERED FROM THE FLEET SUPPLY CHAIN

The Challenge

To produce quality insight, data needs to be collated in volume and analysed with clear objectivity.

The large volume means this is not something that can be easily achieved by spreadsheets, hence the need for more complex systems that can hold the data and facilitate automated and semi-automated validation processes to ensure quality.

Our Solution

Fleetworx have created Centrax™, a proprietary management information system that receives the supply chain data and provides analysis and insight.

Fleetworx work with suppliers, under mandate from the client, to establish appropriate reporting formats and cadence to populate Centrax™.

Data collected depends on the scope of services and contract commercial elements that require monitoring. This will generally include vehicle data, contract parameters and all invoiced cost data from the supplier.

Your Benefits

Accurate data capture is the cornerstone which facilitates supplier and contract performance. A robust and comprehensive data system is the only way to ensure that the data builds valuable long-term business information that can be used to make fully informed decisions across your business.

Just a few of the benefits of holding good, accessible vehicle fleet information:

- Supports leverage negotiations
- Measures impact of strategic and policy initiatives
- Tracks component cost evolution and identifies focus areas
- Savings tracking
- Supports employment cost forecasting (BLF)
- Swift access to information
- Validation of specific supplier spend
- Centralised vendor rebate management
