

A SUPPORT MODULE THAT REVIEWS AND DETERMINES THE FUNDING OPTIONS MOST SUITED TO THE CLIENTS FINANCIAL OBJECTIVES

The Challenge

Companies adopt many different approaches to car fleet funding. These varying attitudes are dictated by factors such as tax position, risk attitude, availability of credit etc.,

However, the challenge faced by many companies is being suitably equipped to decide on the best real-world funding options. The finance department can suggest the best funding option on paper but usually they are not able to fully understand the real world implications of the various funding options e.g. added benefits that need to be included in TCO, and the commercial risks involved under certain schemes.

Our Solution

The Fleetworx Funding Evaluation Module is a tool that uses the extensive experience and expertise of the fleetworx operations team and the analytical power of the Centrax™ system.

Various products and services are applied to cost-models within Centrax. Using real-world scenarios and variable inputs such as the companies attitude to risk, likely commercial leverage, credit availability, ROI expectations etc, Centrax then produces insightful what-if scenarios and recommendations.

Your Benefits

The Fleetworx Funding Evaluation Module provides assurance that all funding options are considered with real-world inputs. This is particularly important when car fleets are expanding, policy is being restructured or the supply chain is being renewed.

Benefits include:

- review all real-world funding options
- model all available options
- advise on best case scenario
- make recommendations to match company financial objectives
