

AN APPROVALS MODULE THAT MANAGES AND APPROVES VEHICLE ORDERS AND ENSURES ADHERENCE TO COMPANY POLICY

The Challenge

Managing the regular churn of company vehicles is very resource intensive. Controlling the order flow of new vehicles, managing the agreements between the employee and vehicle provider, and ensuring the orders meet the specification of the company policy are all disciplines that must be managed to ensure a smooth and accurate order approvals system.

It is not uncommon for lessors to be encouraged, or potentially coerced, by senior personnel for example, to add extras to vehicles that are outside of specification, causing order delay, wasted

Our Solution

The Fleetworx Order Approval module eliminates vehicle selection error and ensures all orders are compatible with the company car selection criteria. Devising a order processing system involving all stakeholders is integral to this module.

The system makes use of the selection criteria that is constructed by Fleetworx after consultation with the lessors and the client company. This selection criteria consists of entitlement levels that contain benchmarking vehicles that form the basis from which the employee makes their vehicle choice.

As part of the process, Fleetworx manage the workstreams of all vehicle orders, approving orders against the pre-agreed selection terms.

Your Benefits

The Fleetworx Order Approval module introduces an impartial level of control over the vehicle ordering process, this ensure tight management of vehicle selection and the elimination of policy abuse and cost creep.

- ensure smooth vehicle ordering process
- reduce administrative burden on in-house fleet stakeholders
- ensure interests of client company represented
- eliminate incorrectly specified vehicles from the fleet
- reduce cost creep
