

A SUPPORT MODULE THAT CONTINUALLY EVALUATES CAR POLICIES AGAINST BEST PRACTICE AND COMPANY OBJECTIVES

The Challenge

Everything evolves in the fleet arena, from vehicle prices and manufacturer products, to finance mechanisms and tax legislation.

Without keeping abreast of these many and frequent changes, it is easy for a fleet program to become obsolete as it becomes unattractive for employees, not cost effective for employers, poorly leveraged, with poor supply service and not tax efficient.

Our Solution

To maintain a healthy and dynamic car fleet provision it is important to continually monitor the financial, fiscal and benefit value that the car policy delivers.

This requires not only tools, skills and expertise but accurate cost dynamics data. Most of this is held in disparate locations under a traditionally managed car fleet whereas under Fleetworx the data is all held in one place and is readily available. The provision of this data means policy reviews can happen accurately and timely.

Your Benefits

It is important to regularly review the car fleet policy and ensure the design is not delivering diminished value and continues to support best-in-class benefits package.

Benefits of the Policy Review Module include:

- effective benchmarking
- manage cost creep
- ensure tight financial management
- deliver competitive rewards package
