

A SERVICE MODULE THAT PROVIDES COMPREHENSIVE MANAGEMENT INFORMATION ON COSTS AND FLEET DYNAMICS, AS WELL AS LEASE COMMITMENT PROJECTIONS

The Challenge

An increasingly rigorous regulatory environment means businesses need to be more aware of costs and financial obligations. Part of the standard governance processes dictates a need for an accurate reflection of past, current and future spend.

Capturing this management information across a disparate supply chain can be difficult. However, there remains the need to report accurately on all financial commitments, respond to internal pressure to understand those obligations and create what-if scenarios.

Our Solution

It is generally difficult to collate the information required to understand the dynamics of a car fleet. The cost of operation, the trends of those costs, the strategic direction of the fleet category and the spend forecasts are all areas that need reviewing.

Centrax™ is Fleetworx's management information system that holds this data in a smart and connected way, providing business information that is relevant, current and accurate; consequently helping validation, governance and forecasting at a high and granular level.

Your Benefits

The Fleetworx Reports and Forecast Module provides a timely and accurate reporting facility to assist in the management of the fleet category.

Having detailed reporting options provides a wealth of benefits to a fleet category manager, including:

- accurate forecasts of each lease commitment
- understand the cost position of the fleet category
- review strategic initiatives and determine accurate ROI
- understand the cost of car provision at employee level in each market

For further information on how the Reports & Forecasts Module can help your fleet management process contact Tom Osborne on 01926 353 300
