

A SERVICE MODULE THAT INITIATES, AUDITS, TRACKS AND REPORTS ON ALL SAVINGS ACCRUED AFTER CLOSE MANAGEMENT OF THE SUPPLY CHAIN

The Challenge

Operating a large car fleet is expensive. A fleet of 2000 vehicles can cost in excess of €20m per year, so the category is being constantly challenged to reduce the total cost of ownership. Although cost saving initiatives are essential to the effective management of the fleet, understanding the efficacy of such activity can prove challenging.

How are the savings tracked? What is a legitimate saving? How is the saving recorded over time? How is the ROI shown? All questions that need to be considered when implementing a programme of cost containment and reduction.

Our Solution

Fleetworx work closely with clients to devise cost-saving initiatives that work within the parameters of individual car fleets. Part of that service is the effective tracking and reporting of the cost-saving activity. Fleetworx operations team has extensive knowledge of the car fleet category and use this experience to isolate and track initiatives.

The Centrax™ system is integral to the reporting processes and produces management reports which highlight accrued savings and ROI.

Your Benefits

The Fleetworx Savings Module produces accurate and concise reporting on all saving initiatives designed to reduce the TCO of the car fleet. It provides;

- clear and concise management information
- agreed methodologies for legitimizing savings
- active recording and tracking of actual delivered periodic and cumulative savings against projected values
- assists in understanding success of strategic decisions
