

A SERVICE MODULE THAT DETERMINES REPORTING LEVEL CAPABILITIES AMONG THE SUPPLY CHAIN AND PURSUES NECESSARY REPORTS

The Challenge

Extracting accurate data from the supply chain requires a level of relationship building that is not always practical to maintain.

Identifying then nurturing the appropriate contact, managing the data migration process and ensuring timely and accurate completion requires constant attention, something that is particularly challenging, especially when it is required across many different suppliers.

Our Solution

Maintaining relationships with a complex supply chain can be inefficient for a single client, however the fleetworx operations team work with suppliers on a daily basis and make these relationships productive.

Our team liaise with the suppliers to agree a mutually acceptable content and collation format and then manage and nurture the relationship through regular contact. They track data submissions and pursue all data against pre-determined deadlines, ensuring a smooth flow of accurate data and reports.

Your Benefits

The Fleetworx Supplier Data Module ensures accurate and timely data is collated and submitted without complication, resulting in:

- accurate data supply
- timely reporting
- ongoing relationship management with key persons in the supply chain
- sustained development of the data repository
- reduced internal resource needed to manage supplier relationships
