

INVOICE MANAGEMENT

M10. SUPPLY CHAIN APPROVAL

fleetworxCOMPLIANCE

AN APPROVALS MODULE THAT MANAGES AND AUTHORISES SUPPLY CHAIN REQUESTS FOR INDIVIDUAL VEHICLE CHARGES

The Challenge

When managing a large car fleet supply chain approval requests can come thick and fast. They can cover many issues, from contract re-writes to repair requests on soon to be re-allocated vehicles. The fact these approval requests often sit outside the standard T&C's of the contract can prove challenging to the client; mainly because there is no-one sufficiently engaged in the category to be comfortable making these decisions.

It is common practice to outsource fleet management, however there are many cases when the decision on a spend would be unethical if made by the outsourced provider, in these cases it is a decision that should be made internally.

Our Solution

Fleetworx offer an impartial position on refurbishment and other charges that could otherwise be made by the lessor to their ultimate benefit. Fleetworx have developed an approvals process within which an experienced operations team review all requests and decide upon a client-first course of action.

Extensive experience in fielding these requests make the process slick and efficient, removing the need to tie-up resource unnecessarily.

Your Benefits

The Supply Chain Approvals module can bring many benefits to the process of dealing with requests that fall outside of the normal contractual obligations:

- close management of spend
- removes the burden of difficult decisions
- unnecessary charges are avoided
- best cost solution is achieved
- informed decisions by experienced operators
