

A SERVICE MODULE THAT PROVIDES CLOSE AND CONSTANT MANAGEMENT OF ALL VENDORS, ENSURING COMPLIANCE, COST CONTAINMENT AND SUPPLIER ENGAGEMENT

The Challenge

Maintaining close management of vendor performance is a key component of a best-in-class company car fleet program.

The most efficient way to track performance and map it against compliance and agreed commercial terms is to take an analytical approach to data collation and interrogation.

However, collating sufficient and relevant data is particularly resource intense, and as fleet is very often a small part of a fleet stakeholders larger portfolio of responsibility, instilling systems to collect the data can be challenging.

Our Solution

The Fleetworx Vendor Management Module uses a combination of data, technology and expertise to review vendor performance against agreed contractual terms.

Central to this process is the collation of large amounts of data and its storage in Centrax™, Fleetworx's proprietary management information system. Centrax™ then takes this information and turns it into insight.

Your Benefits

The Fleetworx Vendor management module is an essential tool for reviewing and managing vendors KPI's.

Benefits include

- minimise cost creep
- generate a strong position in lessor/manufacturer negotiations
- ensures compliance
- evaluates suitability of products
- service level management
- vendor escalation point
